

Data Analytics and Business Intelligence

Hands-on Exercise No. 2

DigiSkills 3.0 Batch-03

By Bakht Zamin

My Solution File

Question 1: You notice that the dataset contains several completely empty rows with no values in any column. These rows will cause errors in calculations and reports.

Task: Remove all empty rows from the dataset using Power Query Editor.

Question 2: After removing empty rows, you find that some transactions have been accidentally entered twice in the dataset (identical values across all columns).

Task: Identify and remove duplicate rows so that each transaction appears only once.

Question 3: The Customer Name column contains names in inconsistent formats. For example: mike williams (all lowercase)

Task: Convert all customer names to Proper Case using the options in Power Query Editor.

18	CA-2018-167164						
19	CA-2018-143336						
20	CA-2018-143336						

Question 4: Your dataset has three separate columns for order date:

Task: Merge the Day, Month, and Year columns into a single column named Order Date. Use a hyphen - as the separator between values.
